

As a member of the Los Angeles community, Safe Companies is helping businesses reopen, rebuild and thrive even in the face of COVID19. By preventing infection to individuals and mitigating risk to stakeholders, it is with pride that we participate in their success and the well being of Southern California.

That success relies on trust, on making people feel absolutely confident that they will be safe when they are onsite and eager to frequent and recommend the property. Safe Companies will help you deliver both the clean environment and the reassurance to customers, employees and the business itself.

We know this relies on cleaning, sanitizing and disinfecting with an intensity like never before - and maintaining that high standard at all times. Reaching those levels and **sustaining** them is where it gets tricky. *How do you know people are safe? How do you keep them safe always? How do you instill trust?* Those are the worries that Safe Companies will eliminate for you. We can do your periodic deep clean and provide longer-lasting protection, we can do your daily upkeep, we can train your staff or cleaning vendor and monitor results, and we can offer proof. Our approach is highly customized and we will structure a plan specifically for you that will make it easier for you to minimize the risks and fears that loom in everyone's mind.

Safe Companies has nearly three decades of experience and is a top expert in the industry. We lead the way as an accredited, forward-thinking **Infection Prevention and Risk Mitigation Service**. In answer to the overwhelming challenges we all face today, we created "**The Defendable Program**." This is a comprehensive 5-point plan that goes beyond cleaning all the way to sustaining the standards and defending against risks and liability.

Briefly the 5 core elements of The Defendable Program are:

- 1. Analysis** - Scrutiny of the physical facility itself and the use of different areas (public spaces, guest rooms, offices), team culture, existing cleaning protocols, current and potential risks.
- 2. Restoration** - Professional deep clean, sanitization and disinfection using high powered equipment, specialized methodologies and products including nontoxic Certified Green EPA Safer Choices, and Barrier Products for long-lasting protection.
- 3. Documentation** - Comprehensive report confirming the ATP results and all the steps taken to reach the required levels of safety; plus a Safe Standard Certification Sticker publicly attesting to the high standards achieved.
- 4. Training** - Education of your in-house staff or daily cleaning vendor so they can really, effectively keep the property safe. With our years of experience, we know that most practitioners are not efficiently mitigating risk as well as they intend, so our training goes deep into OSHA and CDC standards, sanitation protocols, chemical safety, microbial pathogens, techniques and methodologies. Our classes are interactive (fun!) and produce better habits and outcomes. The goal is to see that everyone earns a Training Certificate of Completion.
- 5. Sustainability** - Maintaining the high level of cleanliness is of course key to your business' success, including minimized liability. How will you know that the training is being practiced? How will you know that safety standards are being maintained? You will know with Safe Companies follow-up and regular monitoring. We will measure ATP results, review practices and adjust as necessary. Most importantly, as your obligations will be ongoing, the documentation provided by Safe Companies will verify that the correct actions and results have been maintained - should there (heaven forbid) be any liability actions.

The first step, Analysis is at no cost to you. Conducted onsite by the founder and president of Safe Companies (who is the pre-eminent industry expert); you will be armed with information that will help you keep everyone safe and maintain the highest standards necessary for your success.
